

Choosing an Enterprise SCM Solution

Questions

About MKS

MKS has more than fifteen years of experience in helping the software development community build software applications more easily, reliably and with high quality.

We offer a <u>software configuration management (SCM)</u> and process and <u>workflow management solution</u> for enterprise software development teams working in a distributed, multi-platform environment (UNIX, Win/NT and iSeries). As a part of our overall solution, we also offer tools for source code analysis, which help software development organizations rapidly comprehend complex software systems, assess the impact of changes to code before they are implemented, and improve the quality of their source through coding standards automation.

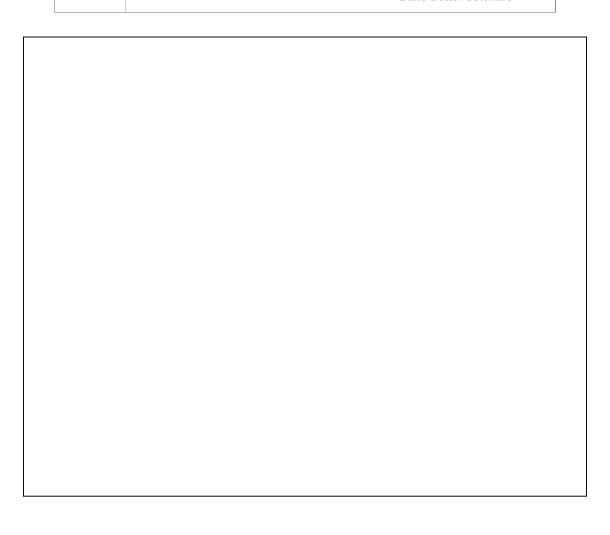

HSBC ◆ Second largest financial and banking institution in the world Chose MKS as enterprise SCM standard for worldwide development, enabling 24/7 follow the sun global development initiative MKS solution now being implemented in eleven countries across 8,000 person development organization

Conseco Finance is a long time customer of MKS, having purchased our Implementer product 5 years ago to control production and distribution of applications on the iSeries platform. They recently acquired Source Integrity Enterprise Edition and Integrity Manager to control the development of 7 new webbased applications that will be running on open systems (i.e. UNIX and Win/NT). One of the main reasons they expanded their commitment with us was because of their desire for consistency across their software development teams. The best example of this consistency can be found in the integration of Integrity Manager with Source Integrity **AND** Implementer. Having the ability to control process and workflow (i.e. defect tracking processes) on all their platforms with a single tool is very compelling for them.

- Integration with Mercury Interactive Test Director
 - Versioning of test plans and scripts
 - Links defects to source code
 - Enforceable development process for defect resolution
 - Routes bugs captured by Mercury Test Director back to the development process
 - Ties source code to bug and inventory of changes
 - Ties features to bugs

Build Better Software™

Test Director 7.6 & 8.0 Defect Module with Integrity Manager 4.5

GA date is January 20th, 2004

Openmake is a software development tool designed to automate the creation of reliable applications through the use of a repeatable software build process. Openmake is designed to eliminate the risks associated with developing Enterprise and eBusiness applications by ensuring that executables are created according to an organizations business objectives the same way every time.

Openmake allows users to record site specific build requirements into a single customizable knowledgebase and then generate a standardized build at any time.

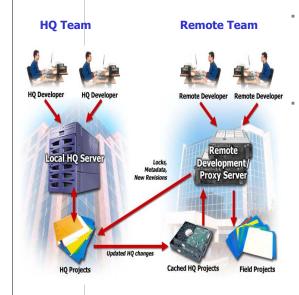

Openmake will improve your build process by:

- streamlining application development by automating the creation of executables
- •eliminating errors in production by ensuring that executables are always created using specified compiler options and the right versions of source code
- •shortening the development lifecycle by enabling users to distribute application component builds across multiple machines
- •reducing application deployment time by supporting true incremental builds

And now, by combining the MKS Integrity Solution with Openmake, you can centralize and automate the entire build process within your overall software development process. Your build files reside in an MKS Source Integrity Enterprise Sandbox™

Enterprise development no longer bound to same physical location

- Availability of local talent
- Better customer service in foreign markets
- Leverage development talent;
 "follow the sun" model, etc

Require Real-time Access to Global Development Repository, independent of location and delivers the following benefits:

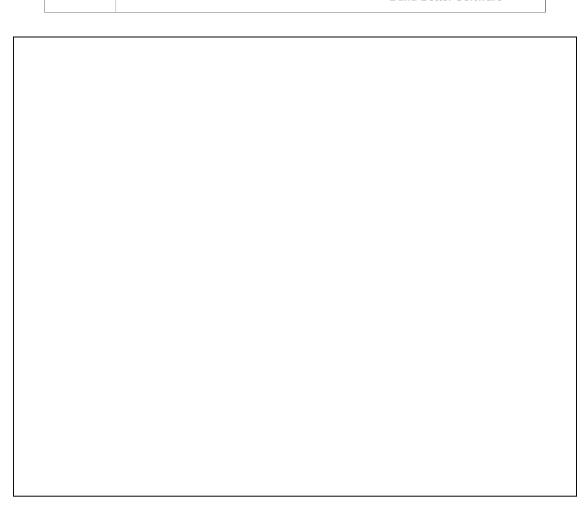

- Keeps entire team informed of progress
- Avoids unnecessary coding conflicts, resulting in <u>higher project</u> costs
- Reduces administrative overhead by managing centralized repository
- Provides better management visibility; <u>especially for offshore</u> <u>contract teams</u>

MKS Integrity Solution 4.6

- Extends MKS's enterprise SCM leadership with new advanced capabilities in SCM, process & workflow management & integration to the enterprise
 - New Open API for easy enterprise integration!
 - Integration with mainframe CM!
 - Waterfall and Iterative development process templates!
 - Advance change package functionality!
 - More, much more...

Open API

- Fully documented and supported JAVA API enables seamless integration into enterprise development environment
- Points of access:
 - JAVA
 - COBOL adapter on zSeries used by Endevor integration
 - RPG adapter on iSeries used by Implementer integration
- Many integration scenarios enabled by the API:

Scenario
Server to server –
Client to server –
Client to client –

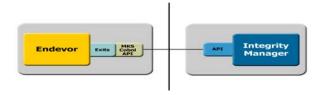

Example
Integrity Manager with a Help Desk
Doors with Integrity Manager

IDE's with Source Integrity Enterprise

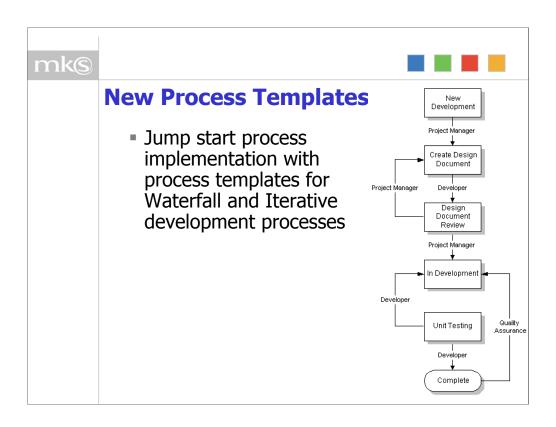

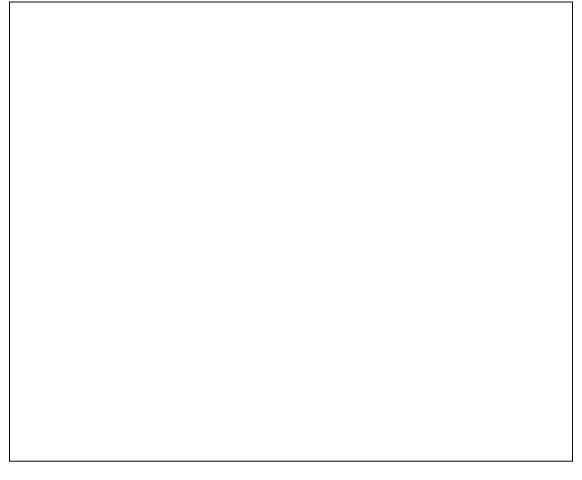

- Via new Cobol adaptor and Open API
- Single web-based change management solution for controlling interdependent development across multiple platform
- Leverages investment in existing mainframe CM
- CA Endevor first delivered integration

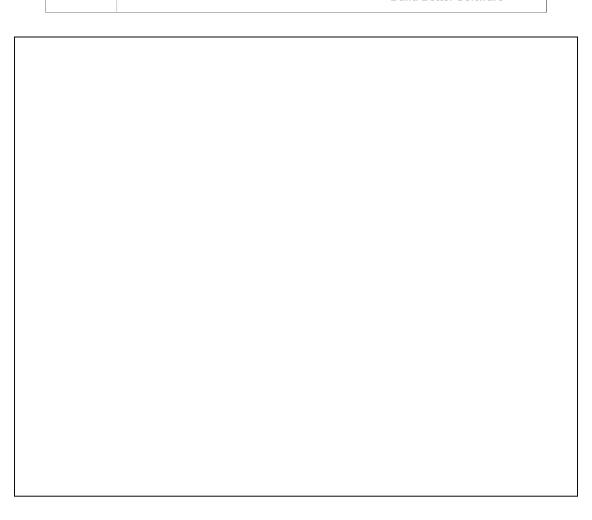

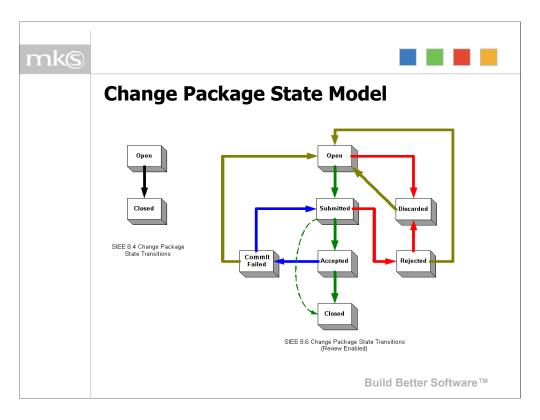

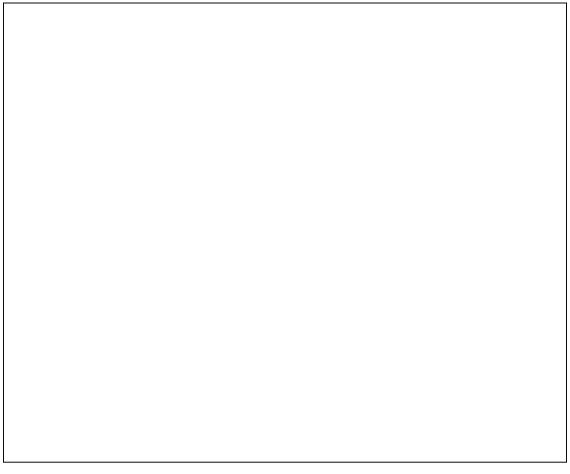

Expanded Change Package Capability

- New CP capabilities put MKS to the front of the market
- Staged CP review provides a built-in mechanism to easily implement formal, enforceable review processes – changes are reviewed before they are committed to repository
- Atomic transactional CPs and ApplyCP enhancements provide more powerful change management abilities
- Ability to modify CPs and better views of CPs enhances usability, improves productivity
- Full trigger support allows for process customization and automation – lower administrative burden, higher productivity

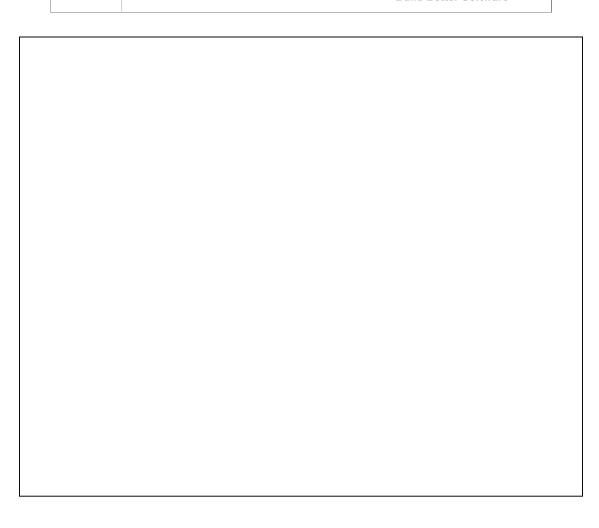

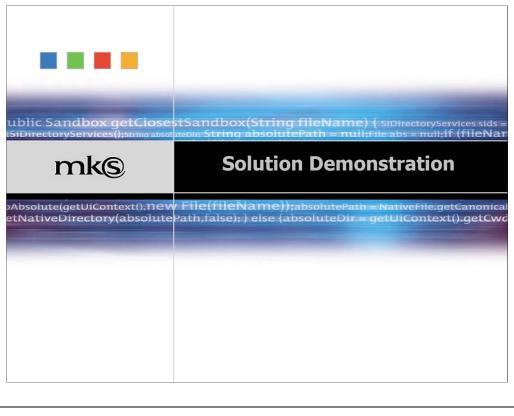

Enhanced Conversion Utilities

- New conversion utility to ease conversion from desktop SCM and competitive solutions
- VSS, PVCS, among others
- Conversion and training of PVCS project & team in less than 5 business days
- Certegy, HSBC, May Department Stores, Union Bank of California all have migrated to enterprise & MKS

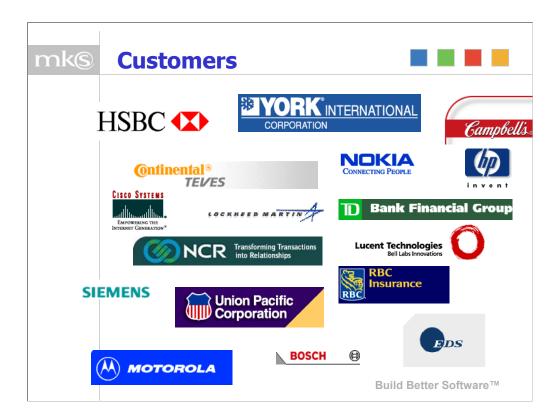

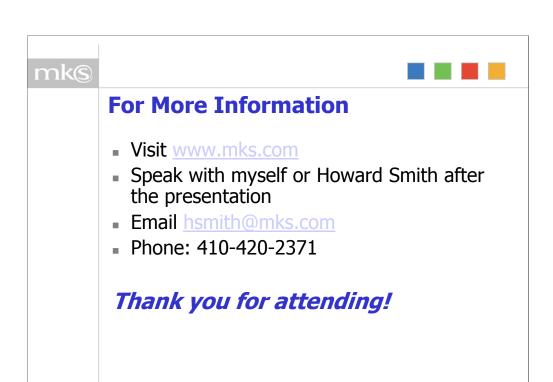

MKS – The Leader in Enterprise SCM

Trends in Enterprise SCM	MKS Integrity Solution
Show me the ROI	MKS offers significantly lower TCO through low administration, implementation & training
Support my increasingly agile processes	MKS offers highly flexibly process and workflow that adapts to any development methodology
Integrate and manage everything I have	Integrations into leading development, QA tools + new Open API keeps solution open and integrated
Support my virtual development team	MKS's innovative Federated Server Architecture gives global development organizations real-time collaboration
