## **iTKO Overview**

# iTKO: Our Customer Mission **Enabling SOA Agility & Quality**

in today's complex technology environments

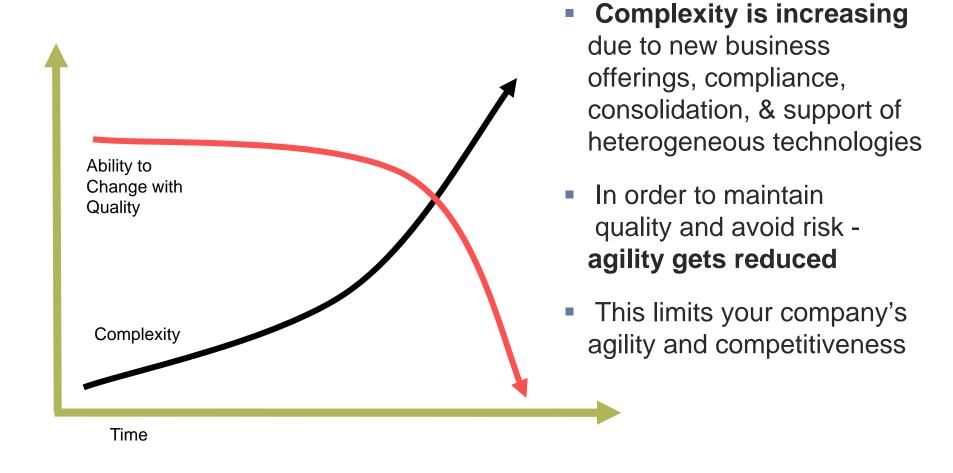

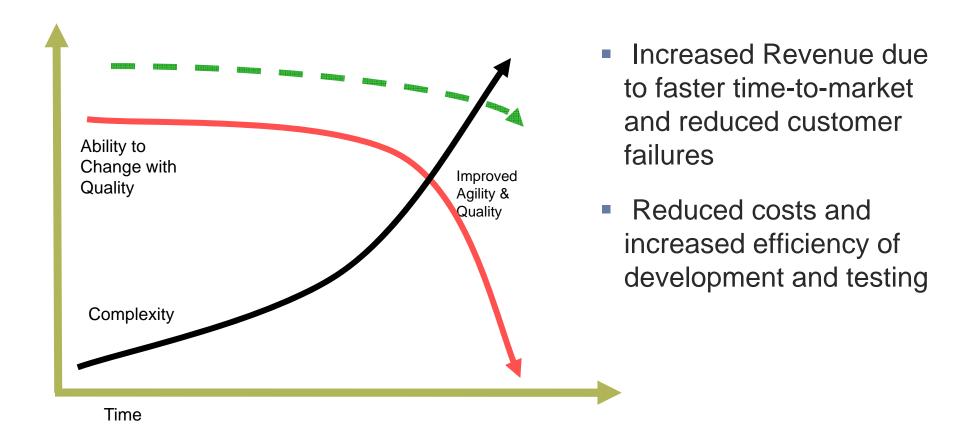

### **Challenge: Increased Complexity**

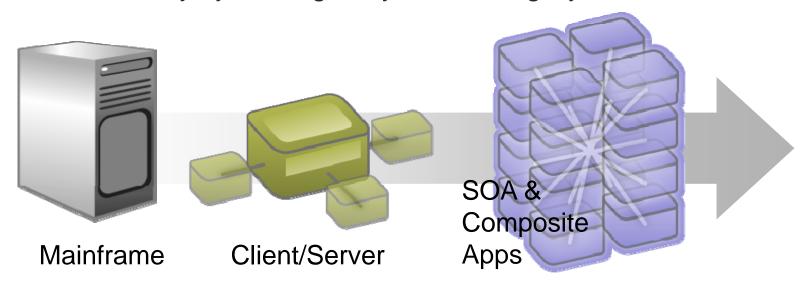

### The Goal: Enable Agility & Quality

### **Specific Issues to Resolve**

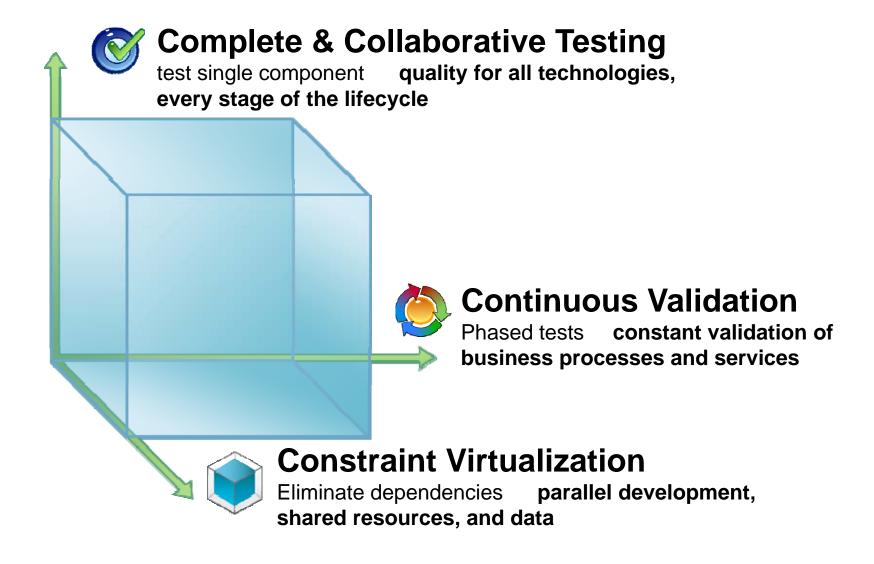

- Inadequate Testing: Traditional testing techniques cannot automate testing against component and middleware-based workflows
- Unintended Consequences: Individual components and technologies are changing at their own pace and can create severe issues within business processes
- Dependency on Constrained Systems: Access and capacity constraints on key systems greatly reduces agility

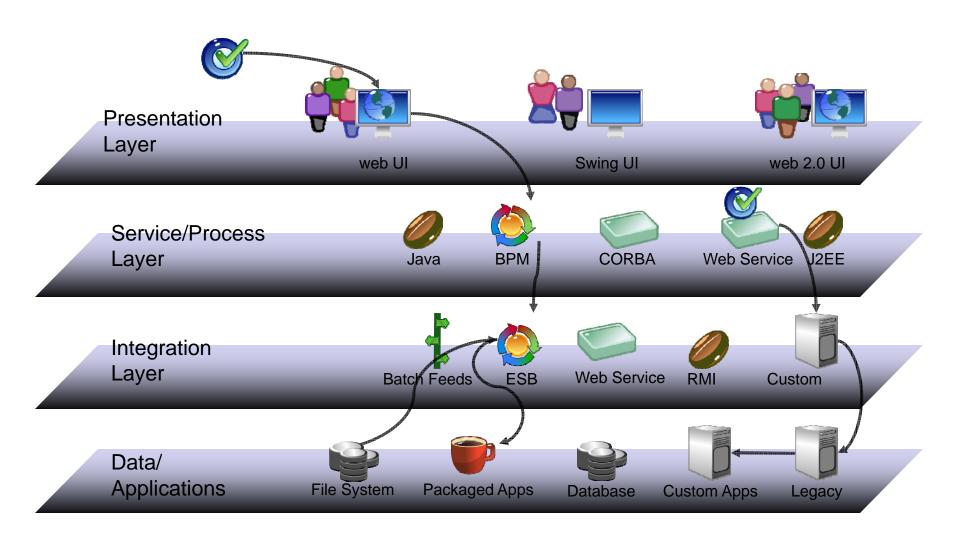

### Strategy: The 4C's

Quality & Agility for Complex Environments

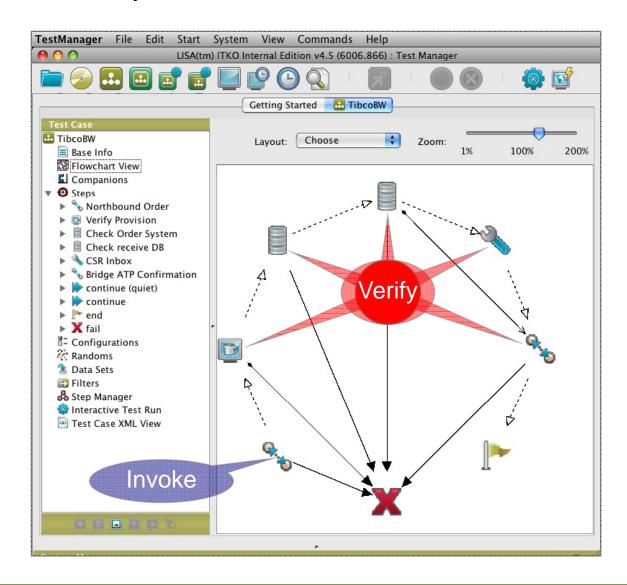

**Technology Coverage at Every Tier** 

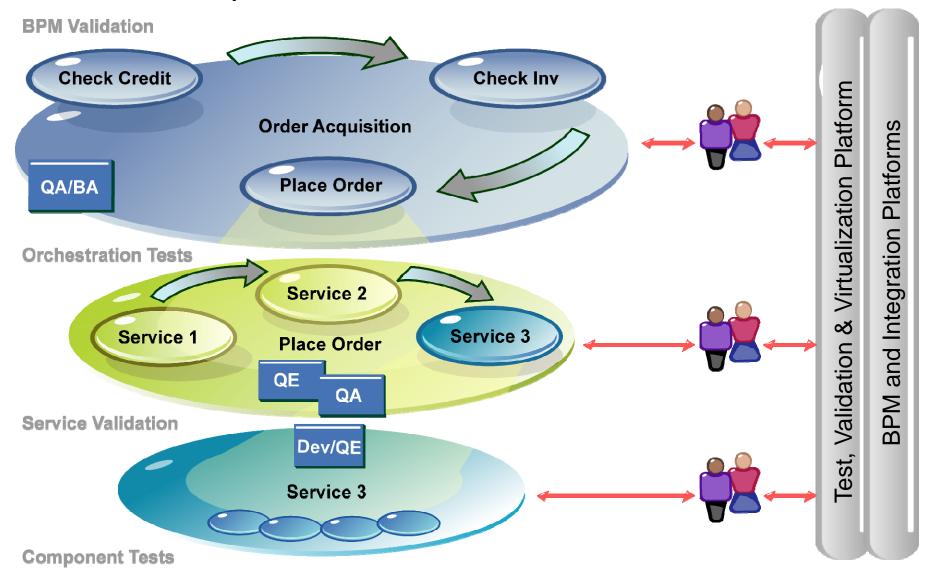

Invoke BP Model, Verify Outcomes

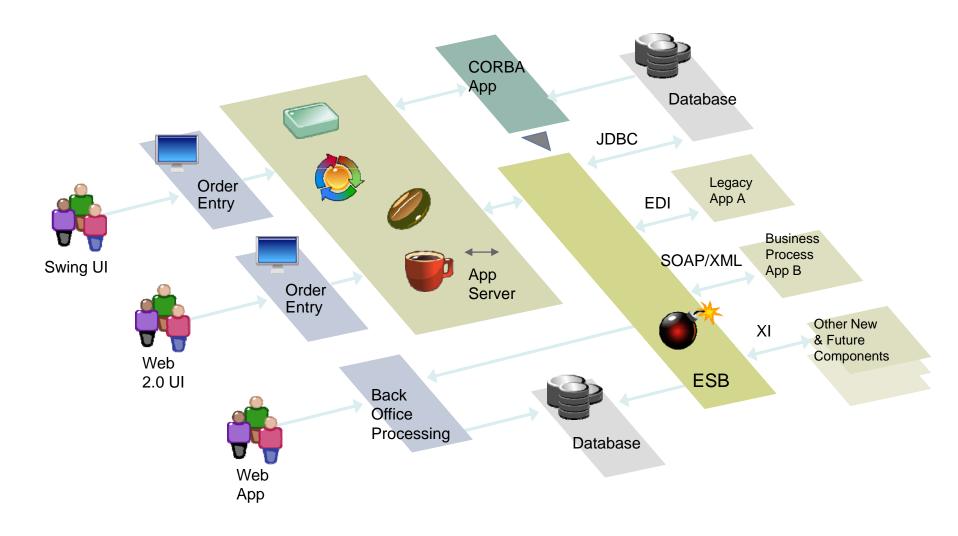

Collaboration at Every Workflow Level

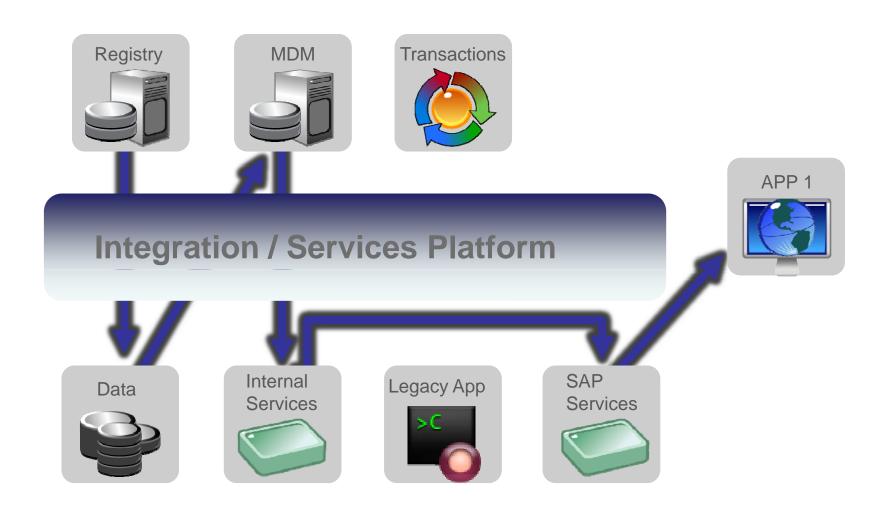

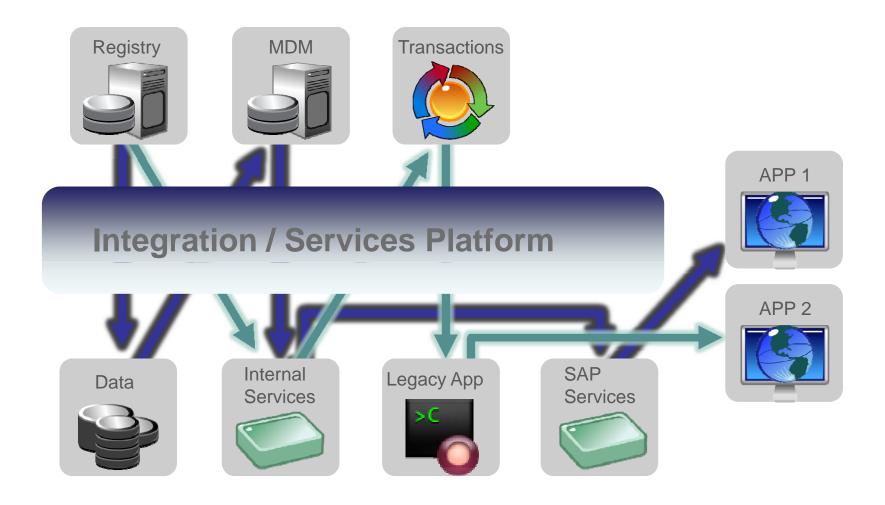

Customer Example: Financial

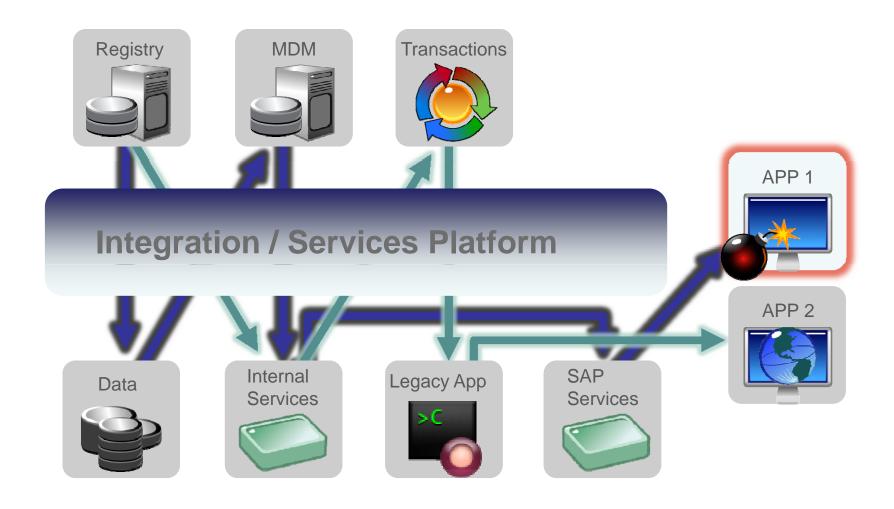

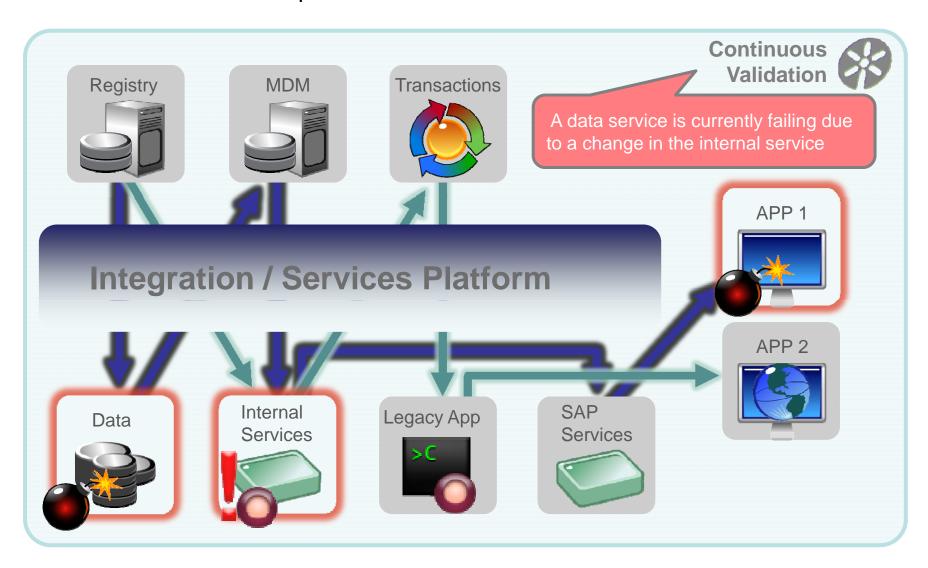

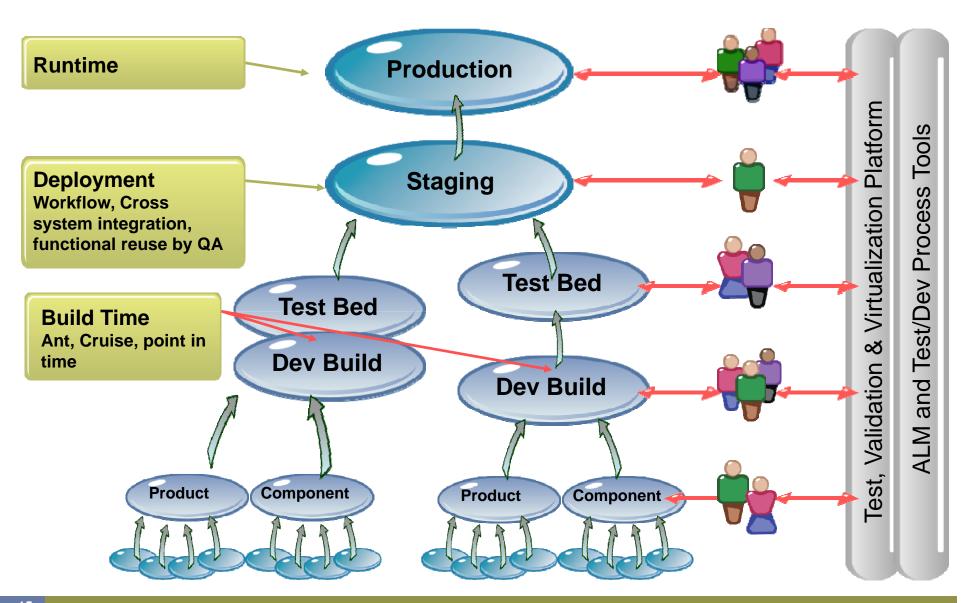

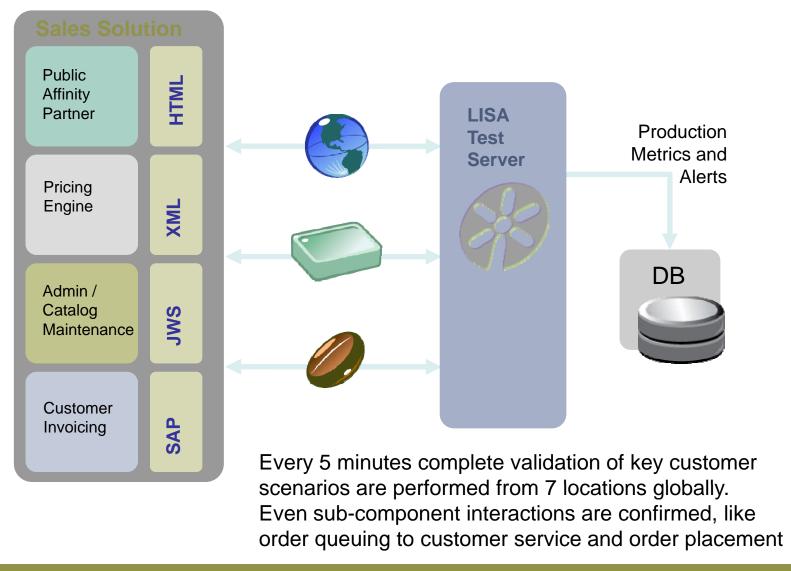

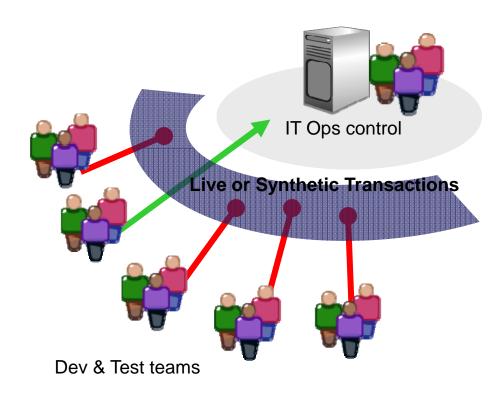

Customer Example: High-Tech Manufacturer

#### **Constraint Virtualization**

Removing dependencies in the SOA lifecycle

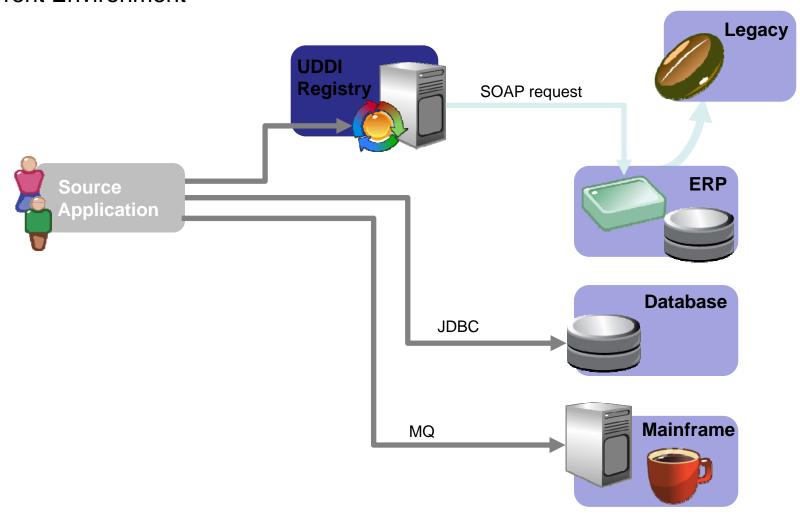

Teams need loose coupling too!

- Dependencies in the deployed system manifest as significant team-to-team constraint issues.
- Teams compete for shared platforms and unavailable, incomplete components, blocking agile and parallel development.
- Data volatility and inconsistency constrains development, quality, and performance validation.

#### **Constraint Virtualization:**

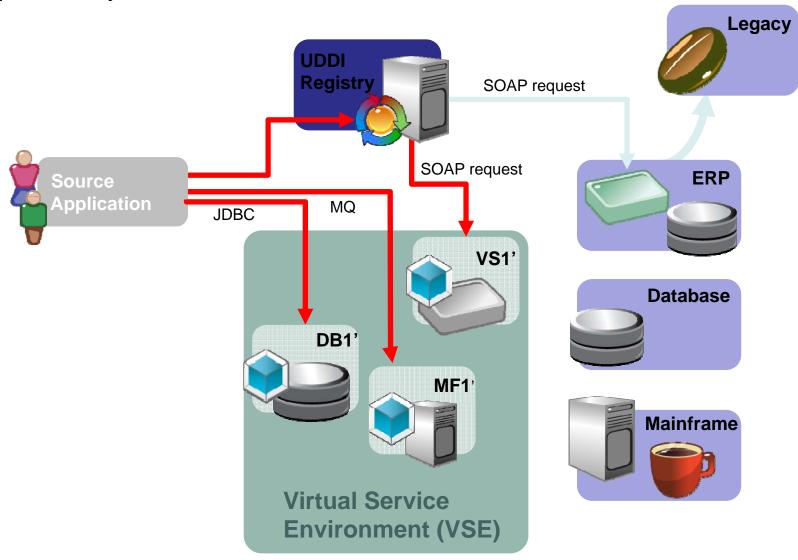

**Current Environment** 

#### **Constraint Virtualization:**

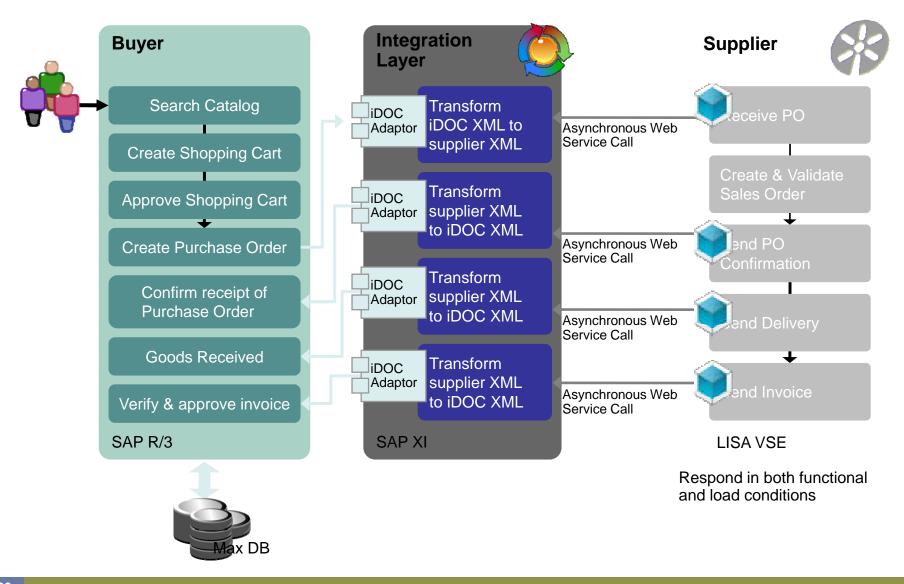

Dependent Systems Virtualized

#### **Constraint Virtualization:**

Procure to Pay (P2P) Process: Simulating Supplier

#### **Our Solution: iTKO LISA**

Increasing Agility & Quality for Complex, Changing IT Environments

#### **LISA Test**

Functional Testing

Agile Regression Testing

Load & Performance Testing

LISA Extensibility Kit

#### **LISA Validate**

Workflow Pathfinder

Continuous Monitoring

SOA Policy Validation

IT Operations Metrics

#### **LISA Virtualize**

Service Simulation

Behavioral Modeling

Performance Environment

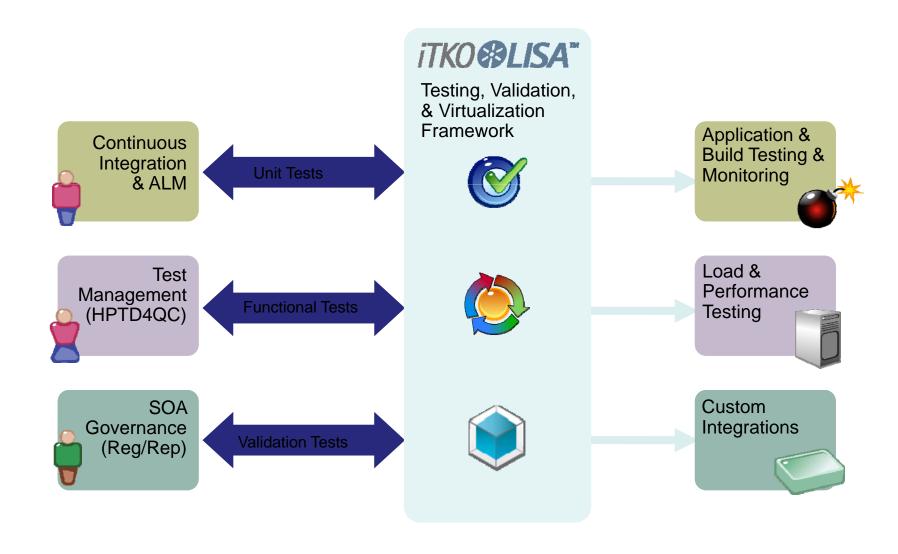

Virtual Service Management

### Integration with your Environment

Reuse Testing, Development & Process Solutions

### iTKO LISA: Our Ecosystem

### **Summary**

- Inadequate Testing: iTKO LISA provides out of the box solution for business process validation and heterogeneous SOA applications
- Unintended Consequences: Validation across the SDLC from development to integration, through production, with one tool integrated into existing infrastructure.
- Dependency on Constrained Systems: Removal of team constraints on key systems, increasing agility of SOA & integration processes.

For more info on LISA's SOA Testing, Validation & Virtualization capabilities and metholodogy:
